B. REQUEST FOR QUOTATION FOR THE SUPPLY AND DELIVERY OF FIELD WORK FLUXGATE MAGNETOMETER INSTRUMENTS

1. BACKGROUND TO SANSA

The South African National Space Agency (SANSA) has a mandate, as outlined in the South African National Space Agency Act, 2008 (Act No 36 of 2008), to co-ordinate and integrate national space science and technology programmes and conduct long-term planning and implementation of space-related activities in South Africa, for the benefit of the citizens of South Africa

2. SCOPE OF WORK (TERMS OF REFERENCE)

1. Scope Background

SANSA clients require an accurate and reliable tool for navigation and mapping applications. The SANSA regional geomagnetic field model is used for this purpose, which takes as input annual ground measurements from repeat stations across southern Africa. The purpose of this RFQ is to identify a suitable supplier to provide **Field Work Fluxgate magnetometer instruments** to SANSA for use in these annual field work campaigns. A total of **two (2)** magnetometers will be required.

SANSA requires a certain standard to be met for its field work measurement instruments to ensure that the new instruments operate and comply with best practices internationally for measurements at repeat stations as well as fit seamlessly with the existing equipment and processes that SANSA already has in place for field work.

SANSA will also rely on the winning bidder for operational and technical support from time to time as well as for maintenance and calibration services to be carried out when it is not possible for SANSA to conduct maintenance on the instruments in house.

2. SCOPE OF WORK

A total of two (2) magnetometers will be required.

The instrument should consist of a suspended, sealed fluxgate sensor, capable of being buried in the ground and a weatherproof electronics unit which can capture, process and store the data from the sensor. power cable. A GPS module and antenna should be included to obtain accurate timestamp and location data.
